LEAN CONCEPT AS A TOOL FOR EDUCATION SYSTEM IMPROVEMENT

Abstract: *Since the effect of the use of LEAN tools in manufacturing has been significant, the use of the tools and concept continue to spread to other fields of life. LEAN tools in education system would make the system better and remove waste. Before this concept is applied, it is necessary to evaluate the system and specify the waste. After the tools are applied successfully within the period of one school year, benefits of students and teachers should be evaluated.*

The target value – here, it is students' knowledge and achievements - would be on the highest possible level, which would improve the school performance

Key words: *LEAN tools application, waste, school performance.*
